๙ No. is the number of results predicted by chance to have Pred.

Deaces 1 to 2979)
DeAngelis, P.L. and Padgett-McCue, A.J.
Identification and molecular cloning of a chondroitin synthase from Pasteurella multocida type F

Pasteurella multocida. Pasteurella multocida Bacteria; Proteobacteria; gamma subdivision; Pasteurellaceae;

Pasteurella.

Pasteurella multocida

Bacteria: Proteobacteria: gamma subdivision; Pasteurella.

Pasteurella.

[ bases 1 to 2919)

Fuller, T.E., Kennedy, M.J. and Lowery, D.E.
Identification of Pasteurella multocida virulence genes septicemic mouse model using signature-tagged mutagenesi.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           21;

Direct Submission

Submitted (28-JUN-1999) The Institute for Genomic Research, 971:

Medical Center Dr., Rockville, MD 20850, USA

On Jul 17, 2001 this sequence version replaced gi:12746529.

* NOTE: This is a "working draft' sequence. It currently

* consists of I contigs. Gaps between the contigs

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

* This sequence as soon as it is available and

* the accession number will be preserved.

The present sequence is the coding sequence of the Pasteurella multocida chondroitan synthase PmCS. PmCS catalyses glycosaminoglycan polymerisation to produce chondroitan: a linear polyaccidaride which has viscoelastic properties which makes it useful for a number of applications. Chondroitan can be used with hyaluronic acid (HA) to coat medical devices e.g. catheters and sensors to reduce tissue abrasion. In addition, they can be used as bloadhesives for haemostatic sealing and healing of wounds and surgical incisions; and as biomaterials that provide sustained delivery of encapsulated drugs, to wounds, ulcers,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GITCITGCICCATIGCCAGAICAIGITAAIGAITITACAIGGIACAAAAAICGAAAAAA 480
                                                                                                                                                                                                                                                                                   Gaps
                                              I method for the enzymatic transfer of sugar molecules to an optor, useful for synthesis of e.g. polysaccharide bioadhesives delivery systems, including hybrid molecules

The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     multocida chondroitin synthase. A chondroitin polysaccharide may be used as a hyaluronan polysaccharide substitute in medial or cosmetic applications, for example in eye or joint applications, for moisturiser or wound dressings. The enzyme may be used in covalently coupling specific drugs, proteins or toxins to the structurally modified procedures, covalently cross linking the hyaluronic acid itself or to other supports to achieve a gel or other three dimensional biomaterial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to the coding sequence of the Pasteurella
                                                                                                                                                                                                                                                                                                 Chondroitin synthase; dermatan sulphate; chondroitin sulphate polymer; eye application; joint application; moisturiser; drug delivery; wound dressing; biocompatible film; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New chondroitin synthase gene obtained from Pasteurella multocida, useful as hyaluronan polysaccharide substitute in medial or cosmetic applications, e.g. for eye or joint applications, for moisturizer or wound dressings
